MEMORANDUM FOR: Director, Office of Development and Engineering

FROM: Richard J. Kerr  
Acting Deputy Director for IntelligenceSUBJECT: Requirements for Capabilities to Transmit  
Annotated Imagery [REDACTED]

25X1

REFERENCE: [REDACTED] for ADDI from D/OD&E, Dated  
18 June 1984, Same Subject

25X1

1. Our preliminary information was that the imagery quality requirement stated in our near-term requirements could probably be met without much difficulty. Because you indicate that it is a severe technical constraint, however, we are interested in working with you to assess this requirement through the set of experiments you propose. We are also interested in learning what funding will be required to support these experiments. [REDACTED]

25X1

2. We are now reviewing the longer-term requirements and plan to respond by early July. These longer-term requirements should enable OD&E to develop cost and schedule estimates. We would like to see these estimates include trade off or opportunity costs for major features of the system, such as costs for different degrees of image quality, to allow us to evaluate alternative configurations for the system. [REDACTED]

25X1

3. The DI point of contact for this effort will be [REDACTED]  
of the Analytic Support Group. [REDACTED]
